1. Open circuit inductance (OCL) Test parameters: 100 kHz, 0.1 V_{rms}, 0.0 Adc, +25 °C

2. Full load inductance (FLL) Test parameters: 100 kHz, 0.1 V_{rms}, I_{sat} , +25 °C

3. I_{rms} : Heat rated current (I_{rms}) will cause the part temperature rise approximately ΔT of 40 °C. Circuit design, component, PCB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the end application. The part temperature (ambient + temp rise) should not exceed +125 °C under worst case operating conditions.

4. I_{sat} : Peak current for approximately 30% rolloff @ +25 °C

5. Part number definition: EXL1V1010-xxx-R

EXL1V1010 = Product code and size

xxx= inductance value in μH , R= decimal point,

If no R is present then third digit equals the number of zeros

-R suffix = RoHS compliant

6. Rated operating voltage: 40 V typical
