Note:

1. Operating temperature range -55°C to 125°C.
2. I_{sat} for Inductance drop 20% from its value without current.
3. I_{rms} for a 40°C temperature rise from 25°C ambient.
4. The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions. Circuit design 125°C under worst case operating conditions. Component placement, PCB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the end application.
5. Absolute maximum voltage 25V DC. (Based on test method, it may not be the same under different application, it is recommended to verify first.)
